Plasterboard Screws are designed for fixing Plasterboard sheeting to frame work. The bugle head countersinks into the Plasterboard without tearing the paper, allowing for easy application of plaster to cover the screw.

A "Yellow Zinc Plated" finish is designed for low corrosion areas. A thin coating of Zinc is applied to the steel by Electrolysis and offers little corrosion resistance.

FIXING TO TIMBER / THIN METAL

**FIBRE CEMENT SCREWS
COLLATED**

- Self Embedding Head

FRAMING NAILER - AIR PNEUMATIC

MODEL#	BBI PART #	DESCRIPTION	NAIL SIZE RANGE	
			Length (mm)	Diam. (mm)
A3490-K1	D57210	Koala 34° Framing Nailer	50 to 90	2.8 - 3.33

Suits BBI Families:

- D19
- D60
- D62

- Suits 34° Angle Nails
- Depth Adjustment For Precise Nailing
- High Capacity, Top Load Magazine
- No-Mar Pad Tip
- Short Height Allows For Use In Tight Areas

COIL NAILER - AIR PNEUMATIC

MODEL#	BBI PART #	DESCRIPTION	NAIL SIZE RANGE	
			Length (mm)	Diam. (mm)
CN565B	D57230	Koala 15° Wire and Plastic Coil Nailer (Medium Power)	32 to 65	2.3 - 2.5

Suits BBI Families:

- N81
- N82
- N85
- N86

- Suits 15° Wire and Plastic Collated Nails
- Aluminium Body
- Lightweight
- Depth Adjustment
- Bump Fire And Sequential Fire Modes

MODEL#	BBI PART #	DESCRIPTION	NAIL SIZE RANGE	
			Length (mm)	Diam. (mm)
SCN65	D57250	Everwin 15° Wire and Plastic Siding Coil Nailer	38 to 65	2.1 - 2.5

Suits BBI Families:

- N81
- N82
- N85
- N86

The SCN65B, driving up to a 2 1/2" nail is perfect for a wide range of siding applications. This tool drives smooth, ring, and screw shank coil nails in both wire and plastic sheet collation. The Aluminium internals ensure longevity but keeps the weight to only 2.3kg. With our patented "PRECISION NAILING TECH" the SCN65B helps you do More, Easier and Faster.

- Aggressive Nose Design for Skew Nailing
- Powerful & Robust

***** DISCONTINUED *****

Koala Nails and Brighton-Best International (AU) are no longer replenishing GAS PNEUMATIC tools. On hand stock is available for purchase, while stocks last.

BULLET HEAD NAILS PLAIN SHANK

- General Use
- Plain Shank
- Bright - Internal Use
- HDG - External Use
- 304 Grade Stainless Steel
- 316 Marine Grade Stainless Steel

A general purpose nail with a small head, allowing the head to be punched below the timber surface and then filled for a clean, neat finish. A nail punch can be used to ensure the nail head sits below the level of the timber. The nail should be 2-3 times longer than the timber that is being held.

“Bright” nails are generally uncoated steel, designed for internal use. They should only be used where possible corrosion is not a concern as they will easily rust when exposed to the elements.

BULLET HEAD NAILS PLAIN SHANK

“Hot Dip Galvanised” is achieved by immersing the product into a bath of molten zinc. The iron in the steel reacts with the molten zinc to produce a corrosion resistant layer on the steel. The process generally leaves a rough finish. “HDG” is one of the cheapest options in corrosion resistance and is suitable for general external use.

BULLET HEAD NAILS PLAIN SHANK

“304” grade stainless (also known as “18/8” or “A2”) comprises of a minimum of 18% Chromium and 8% Nickel. It is the “common” grade of stainless for most applications when looking for a better corrosion resistance than HDG. Ideal for external use and where contact with fresh water is necessary.

“316” (also known as A4) has a better resistance to chemicals and chlorides than 304 grade due to the addition of Molybdenum. It is recommended to be used when the application is close to, or in contact with salt water. It is sometimes referred to as “Marine Grade” for this reason.

FLAT HEAD NAILS PLAIN SHANK

- General Use
- Plain, Twist and Ring Shank
- Bright - Internal Use
- HDG - External Use
- 304 Grade Stainless Steel
- 316 Marine Grade Stainless Steel
- Silicon Bronze

Designed for mainly fixing softwood and thin timbers, the larger head provides larger surface contact with the timber that is being held. This aides in preventing the timber pulling over the head.

“Bright” nails are generally uncoated steel, designed for internal use. They should only be used where possible corrosion is not a concern as they will easily rust when exposed to the elements

FLAT HEAD NAILS PLAIN SHANK

“Hot Dip Galvanised” is achieved by immersing the product into a bath of molten zinc. The iron in the steel reacts with the molten zinc to produce a corrosion resistant layer on the steel. The process generally leaves a rough finish. “HDG” is one of the cheapest options in corrosion resistance and is suitable for general external use.

FLAT HEAD NAILS TWIST SHANK

A “Twist Shank” is formed by twisting the steel wire to create an almost thread like shank. When driven into the timber, it creates a “groove” for the nail to grip to, allowing for a stronger hold. Commonly used where greater holding power is required.

**CLOUTS
PLAIN SHANK**

“Clouts” have a large flat head (Approx. 8mm dia.) designed for fixing metal to timber. The flat surface underneath the head allows for maximum contact between the nail head and fixing surface. They can also be used to fix fabrics such as hessian and canvas.

FIBRE CEMENT NAILS PLAIN SHANK

- Plain Shank
- HDG - External Use
- 304 Grade Stainless Steel
- 316 Marine Grade Stainless Steel

A similar nail to a Flat Head Nail, main point of difference is the "Fibre Cement" nails have a slightly thinner head. This helps minimise visual impact but ensure a strong hold.

ROOFING NAILS PLAIN SHANK

- Plain and Twist Shank
- HDG - External Use

A large domed style head is designed to sit flush with the corrugated iron and provide a water proof seal. The twisted shank offers improved holding power in high wind areas and soft woods.

TIMBERDECK NAILS SCREW SHANK

- Screw and Ring Shank
- HDG - External Use
- 304 Grade Stainless Steel
- 316 Marine Grade Stainless Steel

The specially designed head allows the edges of the head to be driven below the timber surface. The plain shank under the head reduces the likelihood of the decking board splitting when it expands or contracts due to weather conditions.

Designed for use in harder timbers, the "Screw Thread" allows for the nail to twist as it is installed. This aids in preventing the timber from splitting as the nail is driven and also creates a groove for the nail to grip to, which reduces the likelihood of the nail backing out.

CONCRETE/MASONRY NAILS FLUTED SHANK

- Fluted Shank
- Zinc Plated

Made from high-carbon steel and specifically designed to fasten into concrete/masonry. The fluted shank allows for ease of driving and superior holding power. Pre-drilling is recommended and avoid nailing close to the edge of the masonry.

- Plain Shank
- Bright - Internal Use
- Conforms to AS 2334-1980

Panel pins are designed to be punched below the timber level allowing them to be easily filled over for a neat finish. Their smaller head is beneficial when fixing small timber mouldings and beadings.

- Ring Shank
- Bright - Internal Use

Specifically designed to fix Underlay Sheeting, the flat head prevents it pulling through the sheet whilst allowing it to finish flush. The ring shank provides maximum grip and allows aides in reducing movement.

DECKING SPIKES PLAIN SHANK

- General Use
- Plain Shank
- Bright - Internal Use
- HDG - External Use

Available only in 9mm diam, "Deck Spikes" are designed for fixing sleepers to posts. The concave under the head digs into the sleeper providing a neat visual appearance. They are advantageous over a bolt/nut when access behind the post is minimal.

- Plain Shank
- Bright - Internal Use

The unique “dual” head is designed so that the nail is driven into the timber to the depth of the lower (first) head. This leaves the higher (second) head exposed from the timber for easy removal with minimal damage to the timber.

Driven by Brighton-Best

BLUED CUT TACKS TAPERED SHANK

It has a large flat head for holding fabric and the like whilst the tapered shank allows easy driving into timber. The “Blued” finish is achieved by an oxidizing chemical reaction with the steel. This provides a slight rust resistance as well as being visually appealing.

SIZE	BLUED FINISH							QTY.

- Coarse Thread
- Needle Point
- #2 Phillips Drive
- Yellow Zinc Plated

As the name suggests, Chipboard Screws were initially designed for fixing Chipboard/Particle Board. However, over the years they have become known as a “General-Purpose” screw as they can be used in a variety of applications. Chipboard Screws have a coarse thread that runs all the way to the head, this aids in providing a secure grip, especially in soft woods.

FIXING TO TIMBER

**BUGLE BATTEN SCREWS
COARSE THREAD**

- Bugle Head
- Coarse Thread
- T17 Tip
- 5mm Internal Hex Drive
- Yellow Zinc Plated
- Mechanical Gal Class 4
- Stainless 304 Grade
- Stainless 316 Marine Grade

Batten Screws are a large, heavy duty screw designed to fix larger timber joints such as sleepers. The T17 tip makes screwing into such timber easier.
